

» DATAFLOW STUDIO® ALLOWS ONE-TO-ANY ENTERPRISE APPLICATION INTEGRATION

DataFlow Studio Key Business Features and Benefits:

- » Automate your integration of legacy systems, databases and critical software applications across the enterprise without custom programming
- » Fast deployment of your IT integration projects provides measurable ROI
- » Aligns business process management with line of business initiatives
- » Permits documented quality application integration by providing the accuracy and integrity needed for movement of crucial data
- » Tool set addresses the major functions of application integration: data transport, data transformation, application orchestration and adaptation
- » Works with all existing distributed and mainframe operating system platforms

DataFlow Studio Key Technical Features and Benefits:

- » Data Transport tool offers message and file based transfers, multiple-platform support and assured accurate data flow
- » Centralized logic engine provides event-driven scheduling for file transfers, and basic job scheduling for batch jobs and executables. Can be administered from any system in the network or remotely via web browser.
- » Starts any job, on any system in the enterprise, at any global location with your existing job scheduler
- » Converts files to WebSphere MQ messages and WebSphere MQ messages to files. Permits file-based applications to utilize assured, once-only delivery of WebSphere MQ.
- » Connects WebSphere MQ with any ODBC database. Programmers can use the WebSphere MQ Application Programming Interface (MQI) to develop applications that create database transactions.
- » Provides application integration for remote field resources via mail server; Assures critical data is being transferred with email alerts
- » Cost effective security for the exchange of data between a company's secure internal computer server and external users and customers; assured file delivery, centralized administration and management of all enterprise file transfers from one location

Operating Environment

Operating Systems Supported

- » HP Non-Stop Server
- » Windows XP/2000/2003
- » Linux x86
- » OpenVMS Alpha
- » OpenVMS VAX
- » Solaris
- » SCO OpenServer
- » z/OS
- » HP/UX PA-RISC
- » HP/UX Itanium
- » OS/400
- » SINIX
- » AIX

Databases Supported

- » IBM DB2
- » Microsoft SQL Server
- » Any ODBC compliant database
- » Oracle
- » Sybase

Middleware Supported

- » WebSphere MQ

Implementation, Training, and Support

Implementation

- » Consultant installation and configuration
- » Customer installation and configuration

Training

- » Training from MQSoftware is available
- » Both public and private classes, taught by one of our certified instructors, are available

Support

- » **Telephone Support**—calls may be placed directly to support personnel
- » **Website Support**—product support answers and product release information are available at the company website
- » **E-mail Support**—questions can be sent directly to a support staff for review
