

AppWise

➤ AppWise - Project-Based TIBCO EMS Management & Security Solution

Solution Description

AppWise is MQSoftware's browser-based TIBCO Enterprise Message Service (EMS) access and management solution. AppWise delivers an easy to use TIBCO EMS interface for application developers and administrators. With AppWise, developers can configure, and troubleshoot TIBCO EMS applications without having to call an administrative group for assistance. Features such as project-based views, and controlled access to EMS objects increase the productivity of development organizations.

AppWise supplies direct access to TIBCO EMS message objects and headers. Data related problems may be quickly identified and resolved. Information on Connections status is displayed and easily verified. An interactive GUI with scheduled tasks simplifies the creation and management of TIBCO EMS test environments.

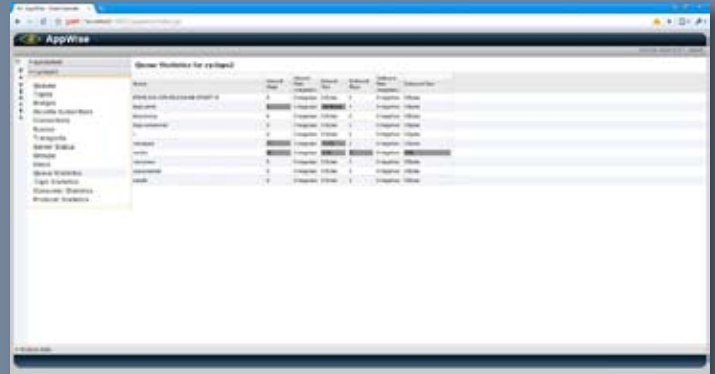

AppWise Key Business Features and Benefits:

- Enables quicker, more precise rollout of TIBCO EMS environments
- Provides visualization of TIBCO EMS objects at a project level
- Reduces developer dependence on TIBCO EMS Administrators
- Enforces the use of TIBCO EMS standards
- Fast administration-free browser access from any location

AppWise

Key Technical Features and Benefits:

- » Supports all TIBCO EMS 4.x and 5.x platforms
- » Supports SSL Channels
- » Centralized Connection Management

Operating Environment

AppWise Server available on:

- » Windows XP/2008/2003/Vista

Middleware Supported:

- » TIBCO Enterprise Message Service
